-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 2837

1. Claim 1 & 3 are objected to because of the following informalities: PWM should not be in parenthesis, a comma should be used instead . Appropriate correction is required.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sekiguchi in view of Gold et al, Currie et al and Chen.

4. Sekiguchi discloses complementary fan rotational speed for monitoring speeds of two or more fans, comprising control unit, first fan connected to control unit and second fan connected to control unit, both fans pulse signal to control unit and wherein speed of either first fan or second fan decreases speed, speed of other fan increases to maintain cooling effect for element that requires heat dissipation, see fig 2 and abstract.

Sekiguchi lacks disclosing specifically stating pwm for control unit , axial or radial fan, warning signal issued to alert malfunction of fan. Gold et al discloses pwm and axial fan see paragraph (0033) and (0036). Currie et al discloses axial or radial fan see paragraph (0043). Chen discloses warning signal see abstract last 4 lines. It would have been obvious to one of ordinary skill in the art to combine complementary fan apparatus of Sekiguchi with pwm of Gold et al , since it is common to have pwm from control circuit, axial and radial fans of Currie et al are common types of fans and warning signal of Chen to prevent breakdown.
